

Laminated Nailed & Glued Columns

When you build your next building ask for Quality Laminated Columns by Forest Products Supply Co!

Forest Products Supply provides a quality alternative to the old standard solid sawn treated posts. Standard solid sawn posts have a greater tendency to warp and twist over time causing material to pull away from building cross members along with truss connections and standard roof framing members, weakening integrity.

- Standard columns are 3 ply 2x6 12'-32' in stock/other lengths and plies available by special order allow 10 days.
- Laminated columns are available non-treated for installation with post base applications as well as fully treated.
- Manufactured with #1 KD Southern Yellow Pine and #1 KDAT Southern Yellow Pine Treated with .60 CCA.
- All Columns nailed with ring shanked galvanized nails and glued together with ASTM rated commercial grade glue.
- Laminated columns are finger jointed for superior strength and stability, more stable than solid sawn posts.
- Laminated columns are planed two sides for appearance and ease of ability to finish during construction.
- Top 24 inches are not nailed or glued allowing for notching for truss application or standard framing.
- Laminated columns 16' or shorter are fully treated to .60 CCA unless special ordered.
- Laminated columns 18' and longer are treated a minimum of 6' to .60 CCA unless special order.
